

GANESH C

Team Lead - Product Engineering

Solution Architect**

PROFESSIONAL SUMMARY

Engineering Team Lead and Solution Architect with 13+ years of experience building scalable Python backend systems, cloud-native platforms, and data pipelines. Currently leading a product engineering team at QWY Soft on QWQER, a hyperlocal delivery and logistics platform (DMS), spanning Django microservices, AWS ECS deployments, PySpark archival at 568M+ row scale, and a GCP BigQuery analytics platform. Proven track record leading teams of 8-10+ engineers, architecting event-driven systems, and delivering production-grade solutions in fintech (PCI-DSS), IoT, payments, and logistics domains.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, PHP

Backend: Django, Django REST Framework, Flask, FastAPI, GraphQL, Celery, Django Channels, Daphne (ASGI/WebSockets)

Frontend: Angular (team oversight)

Databases: PostgreSQL, MongoDB, Redis, MySQL, Neo4j

Data & Analytics: PySpark, AWS Athena, AWS Glue, Google BigQuery, Google Pub/Sub

Cloud - AWS: ECS, ECR, RDS, S3, Lambda, EventBridge, API Gateway, DynamoDB

Cloud - GCP: BigQuery, Pub/Sub, Cloud Run, Cloud SQL, Terraform

DevOps: Docker, Docker Compose, GitHub Actions, GitLab CI/CD, Jenkins, SonarQube

Architecture: Microservices, REST APIs, event-driven systems, serverless, CI/CD pipelines

Integrations: ONDC, payment gateways, Firebase, NDC platform for airline inventory and booking integrations

ML: Keras, RetinaNet (object detection)

PROFESSIONAL EXPERIENCE

QWY Soft - Team Lead / Product Engineer

- Lead engineering team on backend development for QWQER DMS (Delivery Management System), a hyperlocal logistics platform handling order lifecycle, rider dispatch, merchant and admin portals, and real-time tracking using Django DRF, Celery, PostgreSQL, Redis, and RabbitMQ.
- Architected and delivered an order archive pipeline moving PostgreSQL data to S3 Parquet with AWS Glue/Athena catalog; containerized PySpark ETL with idempotent daily incrementals, verification, and safety-gated purge workflows.
- Designed and implemented a GCP analytics platform: Terraform-provisioned Pub/Sub -> BigQuery event pipeline (kpm_events, rider location datasets), real-time Cloud Run alert service (FastAPI), and Power BI-ready reporting marts.
- Manage Docker and AWS ECS deployments for API, multi-priority Celery workers, and Daphne WebSocket services in ap-south-1; maintain GitHub Actions CI/CD pipelines for stage, pre-prod, and production environments.
- Led solution design for geo/dispatch optimization (grid distance caching, Shapely/GDAL benchmarks) and a serverless rider notification scheduler (Lambda, EventBridge, DynamoDB, Firebase FCM).
- Drive integration architecture for ONDC, payment gateways, Shopify, ERP sync, and third-party logistics providers across the platform.

Nuventure Connect - Python Team Lead

- Led a 8+ member cross-functional team on backend API development for TerraOne, an IoT platform for pool and irrigation device control; managed server deployment and GitLab CI/CD pipeline for Flask microservices (Docker, MongoDB, Redis, Celery).
- Delivered a microservices-based web application with Angular frontend and Python backend services.

Ndimensionz Solutions Pvt Ltd - Python Team Lead

- Led backend services for Connected Advisor Platform (CAP) for data prediction and deep learning (Keras/RetinaNet object detection on insurance documents) using Django REST Framework, Flask, PostgreSQL, MongoDB, and Redis.
- Served as Tech Lead on Dasgateway, a payment service provider system integrated with multiple banks (PayVision, Bank One, Omnipay) using Django and PostgreSQL.
- Played a key role in PCI-DSS auditing

Sesame Software Solutions - Senior Software Engineer / Associate Team Lead

- Associate Team Lead for Delinkure, core banking software for NPA risk management, monitoring, and proactive follow-ups.

Muble Software Solutions - Senior Software Engineer

- Developed core Django applications and contributed to an ERP system;

Xminds Infotech Pvt Ltd - Software Developer

- Developed PHP-based web applications for various client projects.

SELECTED PROJECTS

QWQER Analytics Platform

Event-driven analytics on GCP: Pub/Sub topics streaming to BigQuery datasets;

Technologies: Terraform, BigQuery, Pub/Sub, Cloud Run, FastAPI, Cloud SQL

Dasgateway

Payment service provider (PSP) platform for card payment processing integrated with multiple acquiring banks; PCI-DSS compliance workflows, and secure transaction APIs.

Technologies: Django, PostgreSQL, REST APIs

Connected Advisor Platform (CAP)

Financial advisor platform for service delivery and third-party insurance product analysis with ML-based document processing.

Technologies: Django REST Framework, Flask, Keras (RetinaNet), PostgreSQL, MongoDB, Redis

TerraOne IoT Platform

IoT ecosystem for controlling pool devices with REST APIs and microservices.

Technologies: Flask, Docker, GitLab CI/CD, MongoDB, Redis, Celery

EDUCATION

B.Tech - Computer Science

Younus College of Engineering and Technology, Kollam | 2005 - 2009
